The ACT Senior Secondary System

The ACT senior secondary system recognises a range of university, vocational or life skills pathways.

The system is based on the premise that teachers are experts in their area: they know their students and community and are thus best placed to develop curriculum and assess students according to their needs and interests. Students have ownership of their learning and are respected as young adults who have a voice.

A defining feature of the system is school-based curriculum and continuous assessment. School-based curriculum provides flexibility for teachers to address students' needs and interests. College teachers have an opportunity to develop courses for implementation across ACT schools. Based on the courses that have been accredited by the BSSS, college teachers are responsible for developing programs of learning. A program of learning is developed by individual colleges to implement the courses and units they are delivering.

Teachers must deliver all content descriptions; however, they do have flexibility to emphasise some content descriptions over others. It is at the discretion of the teacher to select the texts or materials to demonstrate the content descriptions. Teachers can choose to deliver course units in any order and teach additional (not listed) content provided it meets the specific unit goals.

School-based continuous assessment means that students are continually assessed throughout years 11 and 12, with both years contributing equally to senior secondary certification. Teachers and students are positioned to have ownership of senior secondary assessment. The system allows teachers to learn from each other and to refine their judgement and develop expertise.

Senior secondary teachers have the flexibility to assess students in a variety of ways. For example: multimedia presentation, inquiry-based project, test, essay, performance and/or practical demonstration may all have their place. College teachers are responsible for developing assessment instruments with task specific rubrics and providing feedback to students.

The integrity of the ACT Senior Secondary Certificate is upheld by a robust, collaborative and rigorous structured consensus-based peer reviewed moderation process. System moderation involves all Year 11 and 12 teachers from public, non-government and international colleges delivering the ACT Senior Secondary Certificate.

Only students who desire a pathway to university are required to sit a general aptitude test, referred to as the ACT Scaling Test (AST), which moderates student course scores across subjects and colleges. Students are required to use critical and creative thinking skills across a range of disciplines to solve problems. They are also required to interpret a stimulus and write an extended response.

Senior secondary curriculum makes provision for student-centred teaching approaches, integrated and project-based learning inquiry, formative assessment and teacher autonomy. ACT Senior Secondary Curriculum makes provision for diverse learners and students with mild to moderate intellectual disabilities, so that all students can achieve an ACT Senior Secondary Certificate

The ACT Board of Senior Secondary Studies (BSSS) leads senior secondary education. It is responsible for quality assurance in senior secondary curriculum, assessment and certification. The Board consists of representatives from colleges, universities, industry, parent organisations and unions. The Office of the Board of Senior Secondary Studies (OBSSS) consists of professional and administrative staff who support the Board in achieving its objectives and functions.

ACT Senior Secondary Certificate

Courses of study for the ACT Senior Secondary Certificate:

- provide a variety of pathways, to meet different learning needs and encourage students to complete their secondary education
- enable students to develop the essential capabilities for twenty-first century learners
- empower students as active participants in their own learning
- engage students in contemporary issues relevant to their lives
- foster students' intellectual, social and ethical development
- nurture students' wellbeing, and physical and spiritual development
- enable effective and respectful participation in a diverse society.

Each course of study:

- comprises an integrated and interconnected set of knowledge, skills, behaviours and dispositions that students develop and use in their learning across the curriculum
- is based on a model of learning that integrates intended student outcomes, pedagogy and assessment
- outlines teaching strategies which are grounded in learning principles and encompass quality teaching
- promotes intellectual quality, establish a rich learning environment and generate relevant connections between learning and life experiences
- provides formal assessment and certification of students' achievements.

Vocational Education and Training in ACT Senior Secondary Schools

The Board of Senior Secondary Studies is responsible for the certification of senior secondary school studies in government and non-government schools in the ACT. Students can undertake Vocational Education and Training (VET) as part of a senior secondary certificate and its completion by the student provides credit towards both a recognised VET qualification and a Senior Secondary School Certificate.

The BSSS certifies VET qualifications and Statements of Attainment on behalf of ACT colleges that are Registered Training Organisations (RTOs). The Board also recognises VET qualifications delivered by external RTOs and facilitates the allocation of credit towards the ACT Senior Secondary Certificate based on hours of training and assessment.

The BSSS is not an RTO and is not responsible for those aspects that relate to VET delivery in schools or externally that fall within the role of the RTO.

Vocational programs must be assessed in accordance with the *Standards for Registered Training Organisations 2015* and the guidelines outlined in the relevant training package. Students undertaking A, T and M accredited vocational programs will be assessed against the criteria and achievement standards referenced in the framework to produce A-E grades and scores. They will also be assessed against competency standards as described in the relevant training package.

The BSSS certifies VET that:

- is listed on the national training.gov.au website, and
- is delivered and assessed by an ACT college, which is an RTO with scope from Australian Skills Quality Authority (ASQA) to deliver specified qualifications, or is delivered and assessed by a high school partnering with an ACT college RTO with a Third Party Service Agreement (TPSA)
- is delivered and assessed in accordance with relevant Training Package requirements.

Vocational learning contributes to the ACT Senior Secondary Certificate in a variety of ways:

- BSSS accredited A, T, and M vocational courses with embedded competencies delivered by college RTOs are reported with A–E grades
- BSSS accredited C courses (competency assessment only) delivered by college RTOs are reported with the grade ‘Pass’ where at least one competency is achieved by the student; or ‘Participated’ where no competencies are achieved but assessment and attendance requirements are met
- BSSS E courses recognising study at external RTOs are reported with the grade ‘Pass’
- Australian School Based Apprenticeships (ASBAs) are reported as E courses with the grade ‘Pass.’

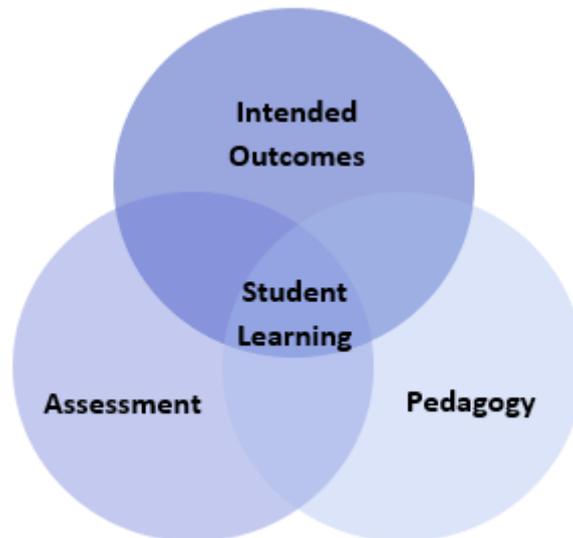

The BSSS credit arrangements recognise VET studies externally:

- through direct credit when the qualification or Units of Competence relate to a VET course that is being studied by the student
- towards the Senior Secondary Certificate, providing the VET does not duplicate school-based study.

Implementing Vocational Education and Training Courses (Appendix E) provides further course information, including training package requirements, and should be read in conjunction with course documents.

Underpinning beliefs

- All students are able to learn.
- Learning is a partnership between students and teachers.
- Teachers are responsible for advancing student learning.

Learning Principles

1. Learning builds on existing knowledge, understandings and skills.
(Prior knowledge)
2. When learning is organised around major concepts, principles and significant real world issues, within and across disciplines, it helps students make connections and build knowledge structures.
(Deep knowledge and connectedness)
3. Learning is facilitated when students actively monitor their own learning and consciously develop ways of organising and applying knowledge within and across contexts.
(Metacognition)
4. Learners' sense of self and motivation to learn affects learning.
(Self-concept)
5. Learning needs to take place in a context of high expectations.
(High expectations)
6. Learners learn in different ways and at different rates.
(Individual differences)
7. Different cultural environments, including the use of language, shape learners' understandings and the way they learn.
(Socio-cultural effects)
8. Learning is a social and collaborative function as well as an individual one.
(Collaborative learning)
9. Learning is strengthened when learning outcomes and criteria for judging learning are made explicit and when students receive frequent feedback on their progress.
(Explicit expectations and feedback)

General Capabilities

All courses of study for the ACT Senior Secondary Certificate should enable students to develop essential capabilities for twenty-first century learners. These ‘capabilities’ comprise an integrated and interconnected set of knowledge, skills, behaviours and dispositions that students develop and use in their learning across the curriculum.

The capabilities include:

- literacy
- numeracy
- information and communication technology (ICT)
- critical and creative thinking
- personal and social
- ethical behaviour
- intercultural understanding

Courses of study for the ACT Senior Secondary Certificate should be both relevant to the lives of students and incorporate the contemporary issues they face. Hence, courses address the following three priorities. These priorities are:

- Aboriginal and Torres Strait Islander histories and cultures
- Asia and Australia’s engagement with Asia
- Sustainability

Elaboration of these General Capabilities and priorities is available on the ACARA website at www.australiancurriculum.edu.au.

Literacy

In Technologies, students develop literacy as they learn how to communicate ideas, concepts and detailed proposals to a variety of audiences. They read and interpret detailed written instructions for specific technologies, often including diagrams and procedural writings such as software user manuals and design briefs. Students read and interpret online documentation and tutorial materials that support coding, prepare software instructions and write reports, project outlines, proposals and evaluations. They use computer-generated images to communicate product or systems design ideas to suit particular contexts and audiences. Students understand and use language and terminology specific to design and technology in both written and oral forms to communicate ideas about product or systems design.

Numeracy

Technologies gives students opportunities to interpret and use mathematical knowledge and skills in a range of real-life situations. Students use number to calculate and create algorithms; interpret and draw conclusions from data; measure and record throughout the process of generating ideas; develop, refine and test concepts use computational thinking in decision-making processes in identifying, deconstructing, and solving problems of interest when designing and creating best-fit solutions. Students examine the usefulness of results and prepare validation plans for calculating outputs of digital solutions. They use code that enables manipulation of numerical data in digital solutions and apply appropriate mathematical and logical concepts and thinking in programming.

Students may interpret numerical data for relevance, understand and use graphs, spreadsheets, diagrams, codes, and statistics to communicate technical data, properties of materials or systems information.

Information and Communication Technology (ICT) Capability

In digital technologies courses, students develop an understanding of the characteristics of data, digital systems, audiences, procedures and computational thinking. They apply this when they investigate, communicate and create digital solutions. Students learn to formulate problems, logically organise and analyse data and represent them in abstract forms. They automate solutions through algorithmic logic. Students decide the best combinations of data, procedures and human and physical resources to generate efficient and effective digital solutions. They create digital solutions that consider economic, environmental and social factors

In learning about and applying the design process, students gain skills using a range of software applications and digital hardware that enable them to realise their design ideas. Students use ICT when they investigate and analyse information and evaluate design ideas and communicate and collaborate online. They develop design ideas; generate plans and system diagrams to communicate their designs and produce solutions using digital technologies. They explore multi-modal ways of representing ideas including infographics. They use digital technologies to work collaboratively on creating innovative solutions.

Critical and Creative Thinking

Students develop capability in critical and creative thinking as they imagine, generate, develop and critically evaluate ideas. They develop reasoning and the capacity for abstraction through challenging problems that do not have straightforward solutions. Students identify and deconstruct problems of interest, refine concepts and reflect on the decision-making process by engaging in systems, design and computational thinking. They identify, explore and clarify technologies information and use that knowledge in a range of situations.

Students think critically and creatively about possible, probable and preferred futures. They consider how data, information, systems and tools (past and present) impact on our lives, and how these elements might be better designed and managed. They evaluate current systems and design of products. Experimenting, visualising possibilities, modelling and scoping solutions, designing and working with digital tools, equipment and software helps students to build their visual and spatial thinking, test hypotheses and to create solutions, products and services.

Personal and Social Capability

Students develop personal and social capability as they engage in project management and development in a collaborative workspace. They direct their own learning, plan and carry out investigations, and become independent learners who can apply design thinking, technologies understanding and skills when making decisions. Students develop social and employability skills through working cooperatively in teams, sharing and discussing ideas about problems, progress, and innovative solutions, listening to and respecting the perspectives of others. There are collaborative opportunities for sharing resources and processes, making group decisions, resolving conflict and showing leadership.

Ethical Behaviour

Students develop the capacity to understand and apply ethical and socially responsible principles when collaborating with others and creating, sharing and using technologies – materials, data, processes, tools and equipment. Using an ethical lens, they investigate past, current and future local, national, regional and global technological priorities. When engaged in systems thinking, students evaluate their findings against the criteria of legality, environmental sustainability, economic viability, health, social and emotional responsibility and social awareness. They explore

complex issues associated with technologies such as the use of data and consider possibilities. They are encouraged to develop informed values and attitudes.

Students learn about safe and ethical procedures for investigating and working with people, data and materials. They consider the rights of others and their responsibilities in using practices that protect human rights and the planet and its life forms. They learn to appreciate and value the part they play in the social and natural systems in which they operate.

Students consider their own roles and responsibilities as discerning citizens and learn to detect bias and inaccuracies. Understanding the protection of data, intellectual property and individual privacy in the school environment helps students to be ethical digital citizens.

Intercultural Understanding

Students consider how technologies are used in diverse communities at local, national, regional and global levels, including their impact and potential to transform people's lives. They explore ways in which past and present practices enable people to use technologies to interact with one another across cultural boundaries. Students investigate how cultural identities and traditions influence the function and form of solutions, products, services and environments designed to meet the needs of daily life now and in the future.

In their interactions with others in online communities, students consider the dynamic and complex nature of cultures, including values, beliefs, practices and assumptions. They recognise and respond to the challenges of cultural diversity by applying appropriate social protocols. Students learn about the interactions between technologies and society and take responsibility for securing positive outcomes for members of all cultural groups including those faced with prejudice and misunderstanding.

Cross Curriculum Priorities

Opportunities exist for students to use Data Science as a means of better understanding these priorities as they engage with interpretation and presentation of relevant data

Aboriginal and Torres Strait Islander Histories and Cultures

The Aboriginal and Torres Strait Islander histories and cultures priority provides the opportunity for all young Australians to gain a deeper understanding and appreciation of Aboriginal and Torres Strait Islander histories and cultures, deep knowledge traditions and holistic world views. This knowledge and understanding will enrich all learners' ability to participate positively in the ongoing development of Australia through a deepening knowledge and connection with the world's oldest continuous living cultures.

The curriculum may provide an opportunity for students to engage with Aboriginal and Torres Strait Islander histories and culture data and information. Teachers may reference these as appropriate to course content.

Asia and Australia's Engagement with Asia

The Asia and Australia's engagement with Asia priority provides the opportunity for students to celebrate the social, cultural, political and economic links that connect Australia with Asia.

This priority will ensure that students learn about and recognise the diversity within and between the countries of the Asia region. They will develop knowledge and understanding of Asian societies, cultures, beliefs and environments, and the connections between the peoples of Asia, Australia, and the rest of the world. Asia literacy provides students with the skills to communicate and engage with the peoples of Asia so they can effectively live, work and learn in the region.

Students investigate a range of contexts that draw on Asia and Australia's engagement with Asia. Students could explore the technological environment within the Asia region and develop an appreciation that technology developed in one area has significant impacts across the world. Students could appreciate that the Asia region plays an important role in technology and design research and development.

Sustainability

The Sustainability priority provides the opportunity for students to develop an appreciation of the necessity of acting for a more sustainable future and so address the ongoing capacity of Earth to maintain all life and meet the needs of the present without compromising the needs of future generations.

This priority will allow all young Australians to develop the knowledge, skills, values and world views necessary for them to act in ways that contribute to more sustainable patterns of living. It will enable individuals and communities to reflect on ways of interpreting and engaging with the world. The Sustainability priority is futures-oriented, focusing on protecting environments and creating a more ecologically and socially just world through informed action. Actions that support more sustainable patterns of living require consideration of environmental, social, cultural and economic systems and their interdependence.

Representations of data are critical to decision making in sustainability issues.

Rationale

Technologies enrich and impact the lives of people and societies globally. Australia needs enterprising individuals who can make discerning decisions about the development and use of technologies and who can independently and collaboratively develop solutions to complex challenges and contribute to sustainable patterns of living. Technologies play an important role in transforming, restoring and sustaining societies and natural, managed and constructed environments.

Technologies enable students to become creative and responsive designers. When students consider the ethical, legal, aesthetic and functional factors combined with the economic, environmental and social impacts of technological change, they are developing the knowledge, understanding and skills enabling them to become discerning decision-makers. Students will also be able to understand how the selection and use of technologies contributes to a sustainable and improved future. Students studying technologies learn about the design process and its application. Students develop research skills, computational thinking and a range of communication skills. They refine their interpersonal and intrapersonal skills including collaboration, project management and be able to reflect on their own learning. Students will have opportunities to use design thinking and apply creativity through structured, collaborative and project based learning, solve problems, develop practical skills and apply critical thinking in the development of new ideas.

This course focuses on developing a greater understanding our world and society through data analysis, statistical inference and related methods in order to understand and analyse phenomena. Students explore and develop solutions to interesting problems in a range of contexts, forming opinions and challenging attitudes using data as evidence to form compelling and persuasive arguments for change and innovation.

Since the advent of computers, individuals and organizations increasingly process information digitally. Data processing occurs through the use of tools such as spreadsheets and databases, and progresses to more automated methods as the quantity and complexity of data being analysed increases. Cloud-based technologies have led to increasingly large data sets and big data

and machine learning techniques now form the basis of automation in many fields of science, social science and the humanities, health and technology.

Data science is the basis of recommendation algorithms, natural language processing, computer vision, artificial intelligence in games and embedded devices and many other modern scientific applications. Students model and implement digital solutions, manipulating, visualising and presenting data to influence decision making and predict the consequences of the actions of individuals, groups and large-scale social change.

Understanding both the power of these analytical techniques and the risks, challenges and ethical dilemmas they present, provides students with a solid foundation for further study, research and employment in a broad range of industries.

Goals

This course should enable students to:

- analyse problems or challenges to determine needs for solutions or products
- apply the process of design (investigate, design, plan, manage, create, evaluate solutions)
- use critical and creative thinking to design innovative solutions
- produce or create solutions or products to address a need, problem or challenge
- evaluate and use technologies in a range of contexts
- demonstrate problem solving skills
- communicate to different audiences using a range of methods
- engage confidently with and responsibly select and manipulate appropriate technologies –, data, systems, and equipment.

Course Title – Data Science

Unit titles

- Data Representation and Analysis
- Big Data Analysis and Techniques
- Machine Learning
- Data Research Project
- Negotiated Study

Organisation of Content

Data Representation and Analysis

This unit explores the ways that digital information is encoded, represented, manipulated, stored, compressed and transmitted. Students develop an understanding of where data comes from, and how to manipulate it using computational tools. Through the interpretation and visualisation of data, students identify patterns and trends, and use these findings to develop narratives and arguments in a variety of contexts.

Big Data Analysis and Techniques

The data-rich world that we live in introduces many complex questions related to public policy, law, ethics and social impact. The goals of this unit are to develop a well-rounded and balanced view about data in the world, including the positive and negative effects of it. Students will develop skills in using data analysis processes, relevant algorithms and techniques and computational tools to analyse Big Data using a multidisciplinary approach.

Machine Learning

This unit explores how Machine Learning is used to develop models for prediction, analysis, diagnosis and recommendation. Students will develop an understanding of Machine Learning, and the algorithms, techniques and processes used in supervised and unsupervised models. They will use Machine Learning to analyse authentic datasets from a range of sources, and investigate the inherent bias in training data. They will be able to build models or applications which enable predictions or recommendations, contextualising the social impact of their Machine Learning application.

Data Research Project

This unit enables students to undertake their own research project to develop and test hypotheses using real-world data sets. They further develop their data analysis skills, and explore patterns in data that yield interesting results. Students will present conclusions drawn from their analysis, and communicate their findings through visualisations and arguments that inform and maximise impact.

Negotiated Study

A negotiated study unit has an important place in senior secondary courses. It is a valuable pedagogical approach that empowers students to make decisions about their own learning. A negotiated study unit is decided upon by a class, group(s) or individual student in consultation with the teacher and with the Principal's approval. The program of learning for a negotiated study unit must meet all the content descriptions as appears in the unit.

Assessment

The identification of criteria within the achievement standards and assessment tasks types and weightings provide a common and agreed basis for the collection of evidence of student achievement.

Assessment Criteria (the dimensions of quality that teachers look for in evaluating student work) provide a common and agreed basis for judgement of performance against unit and course goals, within and across colleges. Over a course, teachers must use all these criteria to assess students' performance but are not required to use all criteria on each task. Assessment criteria are to be used holistically on a given task and in determining the unit grade.

Assessment Tasks elicit responses that demonstrate the degree to which students have achieved the goals of a unit based on the assessment criteria. The Common Curriculum Elements (CCE) is a guide to developing assessment tasks that promote a range of thinking skills (see Appendix B). It is highly desirable that assessment tasks engage students in demonstrating higher order thinking.

Rubrics are constructed for individual tasks, informing the assessment criteria relevant for a particular task and can be used to assess a continuum that indicates levels of student performance against each criterion.

Assessment Criteria

Students will be assessed on the degree to which they demonstrate:

- knowledge and understanding
- skills.

Assessment Task Types

	Design Process	Design Solution(s)
	<p>Suggested tasks:</p> <ul style="list-style-type: none"> • design development • design documentation • essay • extended response • oral presentation • podcast • portfolio (design process) • project management • report • research task • return brief • review • seminar • short response • storyboard • web portfolio • workshop 	<p>Suggested tasks:</p> <ul style="list-style-type: none"> • digital artefact • digital asset • major project • network • portfolio • product • prototyping • software application • storyboard • website
Weightings in A/V 1.0 and 0.5 Units	30 - 70%	30 - 70%
Weightings in T/V 1.0 and 0.5 Units	40 - 60%	40 - 60%
Weighting in M/V 1.0 and 0.5 Units	30 - 70%	30 - 70%

Additional Assessment Information

- For a standard unit (1.0), students must complete a minimum of three assessment tasks and a maximum of five.
- For a half standard unit (0.5), students must complete a minimum of two and a maximum of three assessment tasks.
- Assessment tasks for a standard (1.0) or half-standard (0.5) unit must be informed by the Achievement Standards.
- Students should experience a variety of task types and different modes of communication to demonstrate the Achievement Standards.

Achievement Standards

Years 11 and 12 achievement standards are written for A/T courses. A single achievement standard is written for M courses.

A Year 12 student in any unit is assessed using the Year 12 achievement standards. A Year 11 student in any unit is assessed using the Year 11 achievement standards. Year 12 achievement standards reflect higher expectations of student achievement compared to the Year 11 achievement standards. Years 11 and 12 achievement standards are differentiated by cognitive demand, the number of dimensions and the depth of inquiry.

An achievement standard cannot be used as a rubric for an individual assessment task. Assessment is the responsibility of the college. Student tasks may be assessed using rubrics or marking schemes devised by the college. A teacher may use the achievement standards to inform development of rubrics. The verbs used in achievement standards may be reflected in the rubric. In the context of combined Years 11 and 12 classes, it is best practice to have a distinct rubric for Years 11 and 12. These rubrics should be available for students prior to completion of an assessment task so that success criteria are clear.

Data Representation & Analysis

Value: 1.0

Data Representation & Analysis a

Value 0.5

Data Representation & Analysis b

Value 0.5

Unit Description

This unit explores the ways that digital information is encoded, represented, manipulated, stored, compressed and transmitted. Understanding where data comes from, having intuitions about what could be learned or extracted from it, being able to use computational tools to digitally manipulate data, visualise it and identifying patterns, trends, and to use data to develop narratives and arguments are the primary skills addressed in the unit.

Specific Unit Goals

This unit should enable students to:

A Course	T Course
<ul style="list-style-type: none"> • understand the requirements and issues surrounding the representation, manipulation, collection, encoding, compression, transmission and visualisation of data • explore and apply the strategies and techniques of problem solving in the context of data analysis • create applications which enable interactive investigation of data for an identified problem or domain • examine a range of data analysis techniques and strategies • collaborate with stakeholders, clients and peers in the process of problem identification and resolution 	<ul style="list-style-type: none"> • understand the complex requirements and issues surrounding the representation, manipulation, collection, encoding, compression, transmission and visualisation of data • explore and apply the strategies and techniques of problem solving in the context of data analysis • create applications which enable interactive investigation of data for an identified problem or domain • evaluate a range of data analysis techniques and strategies • collaborate with stakeholders, clients and peers in the process of problem identification and resolution

Content

All knowledge, understanding and skills below must be delivered:

A Course	T Course
Design process	
<ul style="list-style-type: none"> • define the requirements of a problem, and select, acquire or generate the data necessary to solve it • apply a design process to identify and select the most appropriate solution to the chosen problem 	<ul style="list-style-type: none"> • investigate and define the requirements of a problem, and select, acquire or generate the data necessary to solve it • apply a design process to identify and select the most appropriate solution to the chosen problem

A Course	T Course
<ul style="list-style-type: none"> implement digital solutions using artefacts generated from data analysis processes, to discover and tell stories derived from real-world data 	<ul style="list-style-type: none"> implement digital solutions using artefacts generated from data analysis processes, to discover and tell stories derived from real-world data critically evaluate the implications and consequences of acting on conclusions made through analysis, considering interpretation bias, underlying assumptions, and data quality
Strategies, methodologies and procedures	
<ul style="list-style-type: none"> explore and understand data collection methods, considering storage requirements, security strategies and validation techniques use structured data to model entities and relationships in a range of formats, for example: spreadsheets, databases, XML, JSON apply algorithms and analysis techniques to transform, interpret and interrogate data, considering distorting factors implement forms of data visualisation to effectively communicate findings, for example: graphs, plots, tables, animations 	<ul style="list-style-type: none"> evaluate data collection methods, considering storage requirements, security strategies and validation techniques use structured data to model entities and relationships in a range of formats, for example: spreadsheets, databases, XML, JSON select, adapt and apply algorithms and analysis techniques to transform, interpret and interrogate data, considering distorting factors conceptualise and implement relevant forms of data visualisation to effectively communicate findings, for example: graphs, plots, tables, animations
Theories, concepts and materials	
<ul style="list-style-type: none"> understand how the structure, type, quality, nature and purpose of data inform its representation apply algorithmic techniques to trends and patterns in data, distinguishing between coincidence, correlation and causation apply a range of techniques to organise data, for example grouping, filtering, sorting, calculating, combining 	<ul style="list-style-type: none"> understand how the structure, type, quality, nature and purpose of data inform its representation critically analyse the sources and techniques used in the acquisition of data, and how our own biases and opinions can influence our interpretation of results apply algorithmic techniques to trends and patterns in data, distinguishing between coincidence, correlation and causation apply a range of techniques to organise data, including grouping, filtering, sorting, calculating, combining

A Course	T Course
Contexts	
<ul style="list-style-type: none"> analyse the historical and cultural influence of data-driven decision making and disruptive innovation on individual and social utility understand the privacy, security and legal implications of the use of personal, group and population data in data science applications analyse ethical and sustainable considerations in the design and practice of data science 	<ul style="list-style-type: none"> critically analyse the historical and cultural influence of data-driven decision making and disruptive innovation on individual and social utility understand the privacy, security and legal implications of the use of personal, group and population data in data science applications critically analyse ethical and sustainable considerations in the design and practice of data science
Communication	
<ul style="list-style-type: none"> describe how data analysis is used to solve problems, and justify the choices made throughout the design process justify ideas using appropriate evidence and accurate referencing 	<ul style="list-style-type: none"> create narratives to inform decision-making and impact audiences, communicating insights gained through a range of media, including visualisations and data science artefacts explain how data analysis is used to solve problems, and justify the choices made throughout the design process justify ideas using appropriate evidence and accurate referencing
Reflection	
<ul style="list-style-type: none"> reflect on the conclusions of their data analysis, the impact of those conclusions, and the learning gained through the process 	<ul style="list-style-type: none"> reflect on the conclusions of their data analysis, the impact of those conclusions, and the learning gained through the process

A guide to reading and implementing content descriptions

Content descriptions specify the knowledge, understanding and skills that students are expected to learn and that teachers are expected to teach. Teachers are required to develop a program of learning that allows students to demonstrate all the content descriptions.

A program of learning is what a college provides to implement the course for a subject meeting students' needs and interests. It is at the discretion of the teacher to emphasis some content descriptions over others. The teacher may teach additional (not listed) content if it meets the specific unit goals.

For colleges wishing to deliver the VET qualification, there is flexibility for a teacher (provided the RTO has scope) to develop a program of learning aligned with the elements of the VET competencies and A/ T/M content descriptions. The knowledge, skills and understandings within the competencies reflect the same knowledge, skills and understandings of the BSSS course unit content descriptions.

Alternatively, a college may choose the A/T/M course without the VET qualification. In delivering the course teachers write a program of learning aligned with students' needs and interests, meeting the A/T/M content descriptions.

Units of Competency

Competence must be demonstrated over time and in the full range of ICT contexts. Teachers must use this unit document in conjunction with the Units of Competence from the **ICT20115 Certificate II in Information, Digital Media and Technology** or **ICT30115 Certificate III in Information, Digital Media and Technology**, which provide performance criteria, range statements and assessment contexts.

Teachers must address **all content** related to the competencies embedded in this unit. Reasonable adjustment may be made only to the mode of delivery, context and support provided according to individual student needs.

Competencies are attached to units and must be delivered in those units. However, ongoing assessment of competencies can occur while the student is enrolled as an ACT Senior Secondary student.

In order to be deemed competent to industry standard, assessment must provide authentic, valid, sufficient and current evidence as indicated in the relevant Training Package.

For colleges wishing to deliver the VET qualification, there is flexibility for a teacher (provided the RTO has scope) to develop a program of learning aligned with the elements of the VET competencies and A/ T content descriptions. The knowledge, skills and understandings within the competencies reflect the same knowledge, skills and understandings of the BSSS course unit content descriptions.

Alternatively, a college may choose the A/T course without the VET qualification. In delivering the course teachers write a program of learning aligned with students' needs and interests, meeting the A/T content descriptions.

Certificate II in Information, Digital Media and Technology

The following core units must be delivered and assessed over the semester: (if applicable)

Code	Competency Title
BSBSUS201	Participate in environmentally sustainable work practices
BSBWHS201	Contribute to health and safety of self and others
ICTWEB201	Use social media tools for collaboration and engagement

Any elective competencies selected to meet packaging rules from the list below may also be delivered:

Code	Competency Title
ICTICT210	Operate database applications

Certificate III in Information, Digital Media and Technology

The following core units must be delivered and assessed over the semester: (if applicable)

Code	Competency Title
BSBSUS401	Implement and monitor environmentally sustainable work practices
BSBWHS304	Participate effectively in WHS communication and consultation processes

The following elective units from the chosen specialist elective group must be delivered and assessed over the semester:

Group A - Applications	
Code	Competency Title
Nil required	

Any elective competencies selected to meet packaging rules from the list below may also be delivered:

Code	Competency Title
ICTWEB201	Use social media tools for collaboration and engagement
ICTWHS204	Follow work health and safety and environmental policy and procedures
ICTDBS403	Create basic databases
ICTPRG402	Apply query language
ICTPRG425	Use structured query language

It is essential to access www.training.gov.au for detailed up to date information relating to the above competencies.

Big Data Analysis & Techniques

Value: 1.0

Big Data Analysis & Techniques a

Value 0.5

Big Data Analysis & Techniques b

Value 0.5

Unit Description

The data-rich world that we live in introduces many complex questions related to public policy, law, ethics and social impact. The goals of this unit are to develop a well-rounded and balanced view about data in the world, including the positive and negative effects of it. Students develop skills in using data analysis processes, relevant algorithms and techniques and computational tools to analyse Big Data using a multidisciplinary approach.

Specific Unit Goals

This unit should enable students to:

A Course	T Course
<ul style="list-style-type: none"> develop a deep understanding of the nature, structure and handling techniques required for managing big data analyse and visualise big data to address complex problems, and model processes, entities and their relationships critically reflect upon big data sources, types, formats, and structures understand and apply a wide range of strategies and techniques for big data cleaning and standardisation collaborate with stakeholders, clients and peers to interpret, visualise and communicate the results of big data analysis 	<ul style="list-style-type: none"> develop a deep understanding of the nature, structure and handling techniques required for managing big data analyse and visualise big data to address complex problems, and model processes, entities and their relationships critically reflect upon big data sources, types, formats, and structures understand and apply a wide range of strategies and techniques for big data cleaning and standardisation collaborate with stakeholders, clients and peers to interpret, visualise and communicate the results of big data analysis

Content

All knowledge, understanding and skills below must be delivered:

A Course	T Course
Design process	
<ul style="list-style-type: none"> define problems typically solved by large data sets, and select and acquire the data necessary to solve them from large data sets apply a design process to identify and assess the range and scope of potential problems derived from the domain of large data sets implement digital solutions generated with data sets, to discover unfolding stories and gain new insights 	<ul style="list-style-type: none"> investigate and define problems typically solved by large data sets, and select and acquire the data necessary to solve them from large data sets apply a design process to identify and assess the range and scope of potential problems derived from the domain of large data sets implement digital solutions generated from the analysis of large real-world data sets, to discover unfolding stories and gain new insights

A guide to reading and implementing content descriptions

Content descriptions specify the knowledge, understanding and skills that students are expected to learn and that teachers are expected to teach. Teachers are required to develop a program of learning that allows students to demonstrate all the content descriptions.

A program of learning is what a college provides to implement the course for a subject meeting students' needs and interests. It is at the discretion of the teacher to emphasis some content descriptions over others. The teacher may teach additional (not listed) content if it meets the specific unit goals.

For colleges wishing to deliver the VET qualification, there is flexibility for a teacher (provided the RTO has scope) to develop a program of learning aligned with the elements of the VET competencies and A/ T/M content descriptions. The knowledge, skills and understandings within the competencies reflect the same knowledge, skills and understandings of the BSSS course unit content descriptions.

Alternatively, a college may choose the A/T/M course without the VET qualification. In delivering the course teachers will write a program of learning aligned with students' needs and interests, meeting the A/T/M content descriptions. In order to be deemed competent to industry standard, assessment

must provide authentic, valid, sufficient and current evidence as indicated in the relevant Training Package.

Units of Competency

Competence must be demonstrated over time and in the full range of ICT contexts. Teachers must use this unit document in conjunction with the Units of Competence from the **ICT20115 Certificate II in Information, Digital Media and Technology** or **ICT30115 Certificate III in Information, Digital Media and Technology**, which provide performance criteria, range statements and assessment contexts.

Teachers must address **all content** related to the competencies embedded in this unit. Reasonable adjustment may be made only to the mode of delivery, context and support provided according to individual student needs.

Competencies are attached to units and must be delivered in those units. However, ongoing assessment of competencies can occur while the student is enrolled as an ACT Senior Secondary student.

In order to be deemed competent to industry standard, assessment must provide authentic, valid, sufficient and current evidence as indicated in the relevant Training Package.

Certificate II in Information, Digital Media and Technology

The following core units must be delivered and assessed over the semester: (if applicable)

Code	Competency Title
ICTICT201	Use computer operating systems and hardware

Any elective competencies selected to meet packaging rules from the list below may also be delivered:

Code	Competency Title
ICTICT206	Install software applications
ICTSAS202	Apply problem-solving techniques to routine ICT malfunctions
ICTSAS207	Protect and secure information assets

Certificate III in Information, Digital Media and Technology

The following core units must be delivered and assessed over the semester: (if applicable)

Code	Competency Title
Nil required	

The following elective units from the chosen specialist elective group must be delivered and assessed over the semester:

Group A - Applications	
Code	Competency Title
ICTICT304	Implement system software changes
ICTICT308	Use advanced features of computer applications

Any elective competencies selected to meet packaging rules from the list below may also be delivered:

Code	Competency Title
ICTWEB301	Create a simple markup language document
ICTPRG301	Apply introductory programming techniques
ICTPRG403	Develop data-driven applications
ICTPRG407	Write script for software applications
ICTWEB425	Apply structured query language to extract and manipulate data

It is essential to access www.training.gov.au for detailed up to date information relating to the above competencies.

Machine Learning

Value: 1.0

Machine Learning a

Value 0.5

Machine Learning b

Value 0.5

Unit Description

This unit explores how Machine Learning is used to develop models for prediction, analysis, diagnosis and recommendation. Students develop an understanding of Machine Learning, and the algorithms, techniques and processes used in supervised and unsupervised models. They use Machine Learning to analyse authentic datasets from a range of sources, and investigate the inherent bias in training data. They build models or applications which enable predictions or recommendations, contextualising the social impact of their Machine Learning application.

Specific Unit Goals

This unit should enable students to:

A Course	T Course
<ul style="list-style-type: none"> • gain an understanding of the methods used for creating Machine Learning systems, and the ethical issues surrounding the use of Machine Learning systems, such as bias, social influence and population control • explore technologies used for Machine Learning and apply to real-world problems taking into account the functional and non-functional needs of clients and stakeholders • create, train and implement systems of Machine Learning for generating predictions, recognising patterns or suggesting recommendations • evaluate and reflect upon the impacts of, and processes, techniques and strategies used for their Machine Learning application • collaborate with a wide range of stakeholders, clients, peers to analyse a problem and design a solution 	<ul style="list-style-type: none"> • gain a deep understanding of the methods used for creating Machine Learning systems, and the ethical issues surrounding the use of Machine Learning systems, such as bias, social influence and population control • evaluate technologies used for Machine Learning and apply to real-world problems taking into account the functional and non-functional needs of clients and stakeholders • create, train and implement systems of Machine Learning for generating predictions, recognising patterns or suggesting recommendations • critically evaluate and reflect upon the impacts of, and processes, techniques and strategies used for their Machine Learning application • collaborate with a wide range of stakeholders, clients, peers to analyse a problem and design a solution

Contents

All knowledge, understanding and skills below must be delivered:

A Course	T Course
Design process	
<ul style="list-style-type: none"> • define problems appropriate for the machine learning domain, and select and acquire the training and source data necessary to solve them • apply a design process to identify the relevant machine learning strategies, algorithms and approaches most suited to address the selected problem • implement digital solutions using machine learning techniques that reveal new insights and use these to predict, recommend or inform future actions 	<ul style="list-style-type: none"> • investigate and define problems appropriate for the machine learning domain, and select and acquire the training and source data necessary to solve them • apply a design process to identify the relevant machine learning strategies, algorithms and approaches most suited to address the selected problem • implement digital solutions using machine learning techniques that reveal new insights and use these to predict, recommend or inform future actions • critically analyse the implications and consequences of acting on conclusions made through analysis, considering interpretation bias, underlying assumptions, and data quality in both the training and result data sets
Strategies, methodologies and procedures	
<ul style="list-style-type: none"> • explore and understand data collection methods, considering storage requirements, processing needs, platform restrictions, privacy and security requirements and ethical practices • use structured data to model entities and relationships in a range of formats suitable for the machine learning models chosen • apply algorithms and analysis techniques to transform, interpret and interrogate data, considering distorting factors • implement forms of data visualisation to effectively communicate findings, for example: graphs, plots, tables, animations 	<ul style="list-style-type: none"> • evaluate data collection methods, considering storage requirements, processing needs, platform restrictions, privacy and security requirements and ethical practices • use structured data to model entities and relationships in a range of formats suitable for the machine learning models chosen • select, adapt and apply algorithms and analysis techniques to transform, interpret and interrogate data, considering distorting factors • conceptualise and implement relevant forms of data visualisation to effectively communicate findings, for example: graphs, plots, tables, animations

A guide to reading and implementing content descriptions

Content descriptions specify the knowledge, understanding and skills that students are expected to learn and that teachers are expected to teach. Teachers are required to develop a program of learning that allows students to demonstrate all the content descriptions.

A program of learning is what a college provides to implement the course for a subject meeting students’ needs and interests. It is at the discretion of the teacher to emphasis some content descriptions over others. The teacher may teach additional (not listed) content if it meets the specific unit goals.

For colleges wishing to deliver the VET qualification, there is flexibility for a teacher (provided the RTO has scope) to develop a program of learning aligned with the elements of the VET competencies and A/ T/M content descriptions. The knowledge, skills and understandings within the competencies reflect the same knowledge, skills and understandings of the BSSS course unit content descriptions.

Alternatively, a college may choose the A/T/M course without the VET qualification. In delivering the course teachers write a program of learning aligned with students’ needs and interests, meeting the A/T/M content descriptions.

Units of Competency

Competence must be demonstrated over time and in the full range of ICT contexts. Teachers must use this unit document in conjunction with the Units of Competence from the **ICT20115 Certificate II in Information, Digital Media and Technology** or **ICT30115 Certificate III in Information, Digital Media and Technology**, which provide performance criteria, range statements and assessment contexts.

Teachers must address **all content** related to the competencies embedded in this unit. Reasonable adjustment may be made only to the mode of delivery, context and support provided according to individual student needs.

Competencies are attached to units and must be delivered in those units. However, ongoing assessment of competencies can occur while the student is enrolled as an ACT Senior Secondary student.

In order to be deemed competent to industry standard, assessment must provide authentic, valid, sufficient and current evidence as indicated in the relevant Training Package.

Certificate II in Information, Digital Media and Technology

The following core units must be delivered and assessed over the semester: (if applicable)

Code	Competency Title
ICTICT203	Operate application software packages

Any elective competencies selected to meet packaging rules from the list below may also be delivered:

Code	Competency Title
ICTICT211	Identify and use basic current industry specific technologies

Certificate III in Information, Digital Media and Technology

The following core units must be delivered and assessed over the semester: (if applicable)

Code	Competency Title
Nil required	

The following elective units from the chosen specialist elective group must be delivered and assessed over the semester:

Group A - Applications	
Code	Competency Title
ICTICT203	Operate application software packages

Any elective competencies selected to meet packaging rules from the list below may also be delivered:

Code	Competency Title
ICTICT305	Identify and use current industry specific technologies
ICTICT306	Migrate to new technology
BSBCRT401	Articulate, present and debate ideas
ICTPRG417	Apply mathematical techniques for software development

It is essential to access www.training.gov.au for detailed up to date information relating to the above competencies.

Data Research Project

Value: 1.0

Data Research Project a

Value 0.5

Data Research Project b

Value 0.5

Unit Description

This unit enables students to undertake their own research project to develop and test hypotheses using real-world data sets. They further develop their data analysis skills, and explore patterns in data that yield interesting results. Students present conclusions drawn from their analysis, and communicate their findings through visualisations and arguments that inform and maximise impact.

Specific Unit Goals

This unit should enable students to:

A Course	T Course
<ul style="list-style-type: none"> • understand and apply the processes of data acquisition, transformation, analysis, visualisation and presentation, considering privacy and security requirements • explore and decompose real-world problems with precision, taking into account contextual requirements, and apply multifaceted data analysis strategies to the selected problems • create innovative, interactive solutions through applying the techniques of data visualisation or algorithmic methods to share the results of the data research undertaken, incorporating safety, social contexts and ethical and legal responsibilities • evaluate and reflect upon the impacts of, and processes, techniques and strategies used to identify and research a problem, analyse available data, and communicate the results • plan and manage a project using agile and collaborative approaches, identifying and managing risks and considering safety and sustainability 	<ul style="list-style-type: none"> • understand and apply the processes of data acquisition, transformation, analysis, visualisation and presentation, considering privacy and security requirements • evaluate and decompose real-world problems with precision, taking into account contextual requirements, and apply multifaceted data analysis strategies to the selected problems • create innovative, interactive solutions through applying the techniques of data visualisation or algorithmic methods to share the results of the data research undertaken, incorporating safety, social contexts and ethical and legal responsibilities • critically evaluate and reflect upon the impacts of, and processes, techniques and strategies used to identify and research a problem, analyse available data, and communicate the results • plan and manage a project using agile and collaborative approaches, identifying and managing risks and considering safety and sustainability

Content

All knowledge, understanding and skills below must be delivered:

A Course	T Course
Design process	
<ul style="list-style-type: none"> • define a problem to assess its feasibility, scope and appropriateness to selected data sources and analysis approaches • apply a design process to identify and select appropriate techniques, approaches and strategies for solving defined problems • implement digital solutions using a range of data analysis techniques to test and/or validate predictions and hypotheses 	<ul style="list-style-type: none"> • define a problem to assess its feasibility, scope and appropriateness to selected data sources and analysis approaches • apply a design process to identify and select appropriate techniques, approaches and strategies for solving defined problems • implement digital solutions using a range of data analysis techniques to test and/or validate predictions and hypotheses • critically analyse the implications and consequences of acting on conclusions made through analysis, considering interpretation bias, underlying assumptions, and data quality

Theories, concepts and materials	
<ul style="list-style-type: none"> • apply knowledge about the structure, type, quality, nature and purpose of data through the design of the data project • analyse sources and techniques used in the selection and acquisition of data, and how our own biases and opinions can influence our interpretation of results 	<ul style="list-style-type: none"> • apply knowledge about the structure, type, quality, nature and purpose of data through the design of the data project • evaluate sources and techniques used in the selection and acquisition of data, and how our own biases and opinions can influence our interpretation of results

A Course	T Course
<ul style="list-style-type: none"> • apply a range of selected algorithmic techniques to identify trends and patterns in data, make predictions, or apply generative techniques to create new artefacts • apply a range of selected techniques to organise data suited to the selected domain of data science 	<ul style="list-style-type: none"> • apply a range of selected algorithmic techniques to identify trends and patterns in data, make predictions, or apply generative techniques to create new artefacts • apply a range of selected techniques to organise data suited to the selected domain of data science
Contexts	
<ul style="list-style-type: none"> • analyse the historical and cultural influence of data-driven decision making and disruptive innovation on individual and social utility • understand the privacy, security and legal implications of the use of personal, group and population data in data science applications • analyse ethical and sustainable considerations in the design and practice of data science 	<ul style="list-style-type: none"> • critically analyse the historical and cultural influence of data-driven decision making and disruptive innovation on individual and social utility • understand the privacy, security and legal implications of the use of personal, group and population data in data science applications • critically analyse ethical and sustainable considerations in the design and practice of data science
Communication	
<ul style="list-style-type: none"> • create narratives to inform decision-making and impact audiences, communicating insights gained through a range of media, including visualisations and data science artefacts • explain how data analysis is used to solve problems, and justify the choices made throughout the design process • justify ideas using appropriate evidence and accurate referencing 	<ul style="list-style-type: none"> • create narratives to inform decision-making and impact audiences, communicating insights gained through a range of media, including visualisations and data science artefacts • discuss how data analysis is used to solve problems, and justify the choices made throughout the design process • justify ideas using appropriate evidence and accurate referencing
Reflection	
<ul style="list-style-type: none"> • reflect on the conclusions of their data analysis, the impact of those conclusions, and the learning gained through the process 	<ul style="list-style-type: none"> • reflect on the conclusions of their data analysis, the impact of those conclusions, and the learning gained through the process

A guide to reading and implementing content descriptions

Content descriptions specify the knowledge, understanding and skills that students are expected to learn and that teachers are expected to teach. Teachers are required to develop a program of learning that allows students to demonstrate all the content descriptions.

A program of learning is what a college provides to implement the course for a subject meeting students' needs and interests. It is at the discretion of the teacher to emphasis some content descriptions over others. The teacher may teach additional (not listed) content if it meets the specific unit goals.

For colleges wishing to deliver the VET qualification, there is flexibility for a teacher (provided the RTO has scope) to develop a program of learning aligned with the elements of the VET competencies and A/ T/M content descriptions. The knowledge, skills and understandings within the competencies reflect the same knowledge, skills and understandings of the BSSS course unit content descriptions.

Alternatively, a college may choose the A/T/M course without the VET qualification. In delivering the course teachers write a program of learning aligned with students' needs and interests, meeting the A/T/M content descriptions.

Units of Competency

Competence must be demonstrated over time and in the full range of ICT contexts. Teachers must use this unit document in conjunction with the Units of Competence from the **ICT20115 Certificate II in Information, Digital Media and Technology** or **ICT30115 Certificate III in Information, Digital Media and Technology**, which provide performance criteria, range statements and assessment contexts.

Teachers must address **all content** related to the competencies embedded in this unit. Reasonable adjustment may be made only to the mode of delivery, context and support provided according to individual student needs.

Competencies are attached to units and must be delivered in those units. However, ongoing assessment of competencies can occur while the student is enrolled as an ACT Senior Secondary student.

In order to be deemed competent to industry standard, assessment must provide authentic, valid, sufficient and current evidence as indicated in the relevant Training Package.

Certificate II in Information, Digital Media and Technology

The following core units must be delivered and assessed over the semester: (if applicable)

Code	Competency Title
ICTICT202	Work and communicate effectively in an ICT environment
ICTICT204	Operate a digital media technology package

Any elective competencies selected to meet packaging rules from the list below may also be delivered:

Code	Competency Title
ICTICT209	Interact with ICT clients
ICTSAS204	Record client support requirements

Certificate III in Information, Digital Media and Technology

The following core units must be delivered and assessed over the semester: (if applicable)

Code	Competency Title
ICTICT202	Work and communicate effectively in an ICT environment
ICTICT301	Create user documentation
ICTICT302	Install and optimise operating system software
ICTSAS301	Run standard diagnostic tests

The following elective units from the chosen specialist elective group must be delivered and assessed over the semester:

Group A - Applications	
Code	Competency Title
ICTICT307	Customise packaged software applications for clients
ICTICT409	Develop macros and templates for clients using standard products

Any elective competencies selected to meet packaging rules from the list below may also be delivered:

Code	Competency Title
ICTSAS305	Provide ICT advice to clients

It is essential to access www.training.gov.au for detailed up to date information relating to the above competencies.

Assessment

Refer to page 13.

Negotiated Study

Value: 1.0

Negotiated Study a

Value 0.5

Negotiated Study b

Value 0.5

Prerequisites

Students must have studied two standard 1.0 units.

Duplication of Content

Students must not duplicate topics, case studies or issues studied in this course.

Unit Description

A negotiated study unit has an important place in senior secondary courses. It is a valuable pedagogical approach that empowers students to make decisions about their own learning. A negotiated study unit is decided upon by a class, group(s) or individual student in consultation with the teacher and with the Principal's approval. The program of learning for a negotiated study unit must meet all the content descriptions as appears in the unit.

NOTE: There are no VET competencies attached to this unit. VET competencies may be assessed where relevant to the focus of the Unit.

Specific Unit Goals

This unit should enable students to:

A Course	T Course
<ul style="list-style-type: none"> understand a particular area of data science apply data science concepts and methodologies 	<ul style="list-style-type: none"> evaluate and understand a particular area of data science apply data science concepts and methodologies

A guide to reading and implementing content descriptions

Content descriptions specify the knowledge, understanding and skills that students are expected to learn and that teachers are expected to teach. Teachers are required to develop a program of learning that allows students to demonstrate all the content descriptions.

A program of learning is what a college provides to implement the course for a subject meeting students' needs and interests. It is at the discretion of the teacher to emphasis some content descriptions over others. The teacher may teach additional (not listed) content if it meets the specific unit goals.

For colleges wishing to deliver the VET qualification, there is flexibility for a teacher (provided the RTO has scope) to develop a program of learning aligned with the elements of the VET competencies and A/ T/M content descriptions. The knowledge, skills and understandings within the competencies reflect the same knowledge, skills and understandings of the BSSS course unit content descriptions.

Alternatively, a college may choose the A/T/M course without the VET qualification. In delivering the course teachers write a program of learning aligned with students' needs and interests, meeting the A/T/M content descriptions.

Appendix A – Implementation Guidelines

Available course patterns

A standard 1.0 value unit is delivered over at least 55 hours. To be awarded a course, students must complete at least the minimum units over the whole minor, major, major/minor or double major course.

Course	Number of standard units to meet course requirements
Minor	Minimum of 2 units
Major	Minimum of 3.5 units

Units in this course can be delivered in any order.

Prerequisites for the course or units within the course:

For the Negotiated Study Unit (if applicable), students must have studied a minimum of two standard 1.0 units.

Arrangements for students continuing study in this course

Students who studied the previous course may undertake any units in this course provided there is no duplication of content.

Duplication of Content Rules

Students cannot be given credit towards the requirements for a Senior Secondary Certificate for a unit that significantly duplicates content in a unit studied in another course. The responsibility for preventing undesirable overlap of content studied by a student rests with the principal and the teacher delivering the course. While it is acceptable for a student to be given the opportunity to demonstrate competence in VET qualifications over more than one semester, substantial overlap of content is not permitted. Students will only be given credit for covering the content once.

Relationship to other courses

This course shares common competencies with other BSSS accredited courses:

- Digital Technologies
- Digital Products
- Robotics and Mechatronics
- Networking and Security

New and/or updated Training Package

Training Packages are regularly updated through the mandatory continuous improvement cycle. This may result in updating of qualifications and a change in the composition of competencies within a qualification. Where qualifications from the new Training Package have been deemed to be equivalent, students may continue their study without interruption. Students will be granted direct credit for those competencies already achieved.

Where there are new competencies or updated competencies with significant change and these are deemed not equivalent, students may apply for Recognition of Prior Learning (RPL) for all or part of competencies.

Granting of RPL for competencies does not equate to points towards the Senior Secondary Certificate.

Recognition of Prior Learning (RPL)

RPL is an assessment process that assesses an individual's formal, non-formal and informal learning to determine the extent to which that individual has achieved the required learning outcomes, competence outcomes, or standards for entry to, and/or partial or total completion of, a VET qualification.

Recognition of competence through the RPL process should be granted to students through gathering supplementary evidence against elements, skills and knowledge from the Training Package as well as through established assessment criteria. RPL may be granted for individual Units of Competence where the evidence is sufficient to do so.

A student having been granted RPL for one or more Units of Competence will still be required to fulfill the time based component of units that contributes to points and A to E grading for the Senior Secondary Certificate.

To cater for this requirement, curriculum designers should design the course to be flexible enough to accommodate students who have gained some competencies through RPL.

Students may demonstrate the achievement of learning outcomes through challenge testing, interview or other means that the teacher deems reasonable. Full records of the RPL process and results must be stored by the college for perusal by the National VET Regulator upon request and should confirmation be required for VET certification. The college must be informed of the application of RPL before the start of the unit that includes the competency. For RPL to be awarded, the Units of Competency must be demonstrated in the Industry context.

Guidelines for Delivery

Program of Learning

A program of learning is what a school provides to implement the course for a subject. This meets the requirements for context, scope and sequence set out in the Board endorsed course. Students follow programs of learning in a college as part of their senior secondary studies. The detail, design and layout of a program of learning are a college decision.

The program of learning must be documented to show the planned learning activities and experiences that meet the needs of particular groups of students, taking into account their interests, prior knowledge, abilities and backgrounds. The program of learning is a record of the learning experiences that enable students to achieve the knowledge, understanding and skills of the content descriptions. There is no requirement to submit a program of learning to the OBSSS for approval. The Principal will need to sign off at the end of Year 12 that courses have been delivered as accredited.

Content Descriptions

Are all content descriptions of equal importance? No. It depends on the focus of study. Teachers can customise their program of learning to meet their own students' needs, adding additional content descriptions if desired or emphasising some over others. A teacher must balance student needs with their responsibility to teach all content descriptions. It is mandatory that teachers address all content descriptions and that students engage with all content descriptions.

Half standard 0.5 units

Half standard units appear on the course adoption form but are not explicitly documented in courses. It is at the discretion of the college principal to split a standard 1.0 unit into two half standard 0.5 units. Colleges are required to adopt the half standard 0.5 units. However, colleges are not required to submit explicit documentation outlining their half standard 0.5 units to the BSSS. Colleges must assess students using the half standard 0.5 assessment task weightings outlined in the framework. It is the responsibility of the college principal to ensure that all content is delivered in units approved by the Board.

Reasonable Adjustment

Units in this course are suitable for students requiring reasonable adjustment for delivery and assessment. However, standards of competency (outcomes) as dictated by National Training Packages **cannot be modified**. Students must demonstrate competence to the level required by industry in order to gain a Statement of Attainment or Vocational Certificate.

Moderation

Moderation is a system designed and implemented to:

- provide comparability in the system of school-based assessment
- form the basis for valid and reliable assessment in senior secondary schools
- involve the ACT Board of Senior Secondary Studies and colleges in cooperation and partnership
- maintain the quality of school-based assessment and the credibility, validity and acceptability of Board certificates.

Moderation commences within individual colleges. Teachers develop assessment programs and instruments, apply assessment criteria, and allocate Unit Grades, according to the relevant Course Framework. Teachers within course teaching groups conduct consensus discussions to moderate marking or grading of individual assessment instruments and unit grade decisions.

The Moderation Model

Moderation within the ACT encompasses structured, consensus-based peer review of Unit Grades for all accredited courses, as well as statistical moderation of course scores, including small group procedures, for T courses.

Moderation by Structured, Consensus-based Peer Review

Review is a subcategory of moderation, comprising the review of standards and the validation of Unit Grades. In the review process, Unit Grades, determined for Year 11 and Year 12 student assessment portfolios that have been assessed in schools by teachers under accredited courses, are moderated by peer review against system wide criteria and standards. This is done by matching student performance with the criteria and standards outlined in the unit grade descriptors as stated in the Course Framework. Advice is then given to colleges to assist teachers with, and/or reassure them on, their judgments.

Preparation for Structured, Consensus-based Peer Review

Each year, teachers teaching a Year 11 class are asked to retain originals or copies of student work completed in Semester 2. Similarly, teachers teaching a Year 12 class should retain originals or copies of student work completed in Semester 1. Assessment and other documentation required by the Office of the Board of Senior Secondary Studies should also be kept. Year 11 work from Semester 2 of the previous year is presented for review at Moderation Day 1 in March, and Year 12 work from Semester 1 is presented for review at Moderation Day 2 in August.

In the lead up to Moderation Day, a College Course Presentation (comprised of a document folder and a set of student portfolios) is prepared for each A, T and M course/units offered by the school and is sent in to the Office of the Board of Senior Secondary Studies.

The College Course Presentation

The package of materials (College Course Presentation) presented by a college for review on moderation days in each course area will comprise the following:

- a folder containing supporting documentation as requested by the Office of the Board through memoranda to colleges
- a set of student portfolios containing marked and/or graded written and non-written assessment responses and completed criteria and standards feedback forms. Evidence of all assessment responses on which the unit grade decision has been made is to be included in the student review portfolios.

Specific requirements for subject areas and types of evidence to be presented for each Moderation Day will be outlined by the Board Secretariat through memoranda and Information Papers.

Visual evidence for judgements made about practical performances

(also refer to BSSS Website Guidelines)

It is a requirement that schools' judgements of standards to practical performances (A/T/M) be supported by visual evidence (still photos or video).

The photographic evidence submitted must be drawn from practical skills performed as part of the assessment process.

Teachers should consult the BSSS guidelines at:

http://www.bsss.act.edu.au/grade_moderation/moderation_information_for_teachers

for current information regarding all moderation requirements including subject specific and photographic evidence.

Course Developers

Name	College

Appendix B – Common Curriculum Elements

Common curriculum elements assist in the development of high-quality assessment tasks by encouraging breadth and depth and discrimination in levels of achievement.

Organisers	Elements	Examples
create, compose and apply	apply	ideas and procedures in unfamiliar situations, content and processes in non-routine settings
	compose	oral, written and multimodal texts, music, visual images, responses to complex topics, new outcomes
	represent	images, symbols or signs
	create	creative thinking to identify areas for change, growth and innovation, recognise opportunities, experiment to achieve innovative solutions, construct objects, imagine alternatives
	manipulate	images, text, data, points of view
analyse, synthesise and evaluate	justify	arguments, points of view, phenomena, choices
	hypothesise	statement/theory that can be tested by data
	extrapolate	trends, cause/effect, impact of a decision
	predict	data, trends, inferences
	evaluate	text, images, points of view, solutions, phenomenon, graphics
	test	validity of assumptions, ideas, procedures, strategies
	argue	trends, cause/effect, strengths and weaknesses
	reflect	on strengths and weaknesses
	synthesise	data and knowledge, points of view from several sources
	analyse	text, images, graphs, data, points of view
	examine	data, visual images, arguments, points of view
investigate	issues, problems	
organise, sequence and explain	sequence	text, data, relationships, arguments, patterns
	visualise	trends, futures, patterns, cause and effect
	compare/contrast	data, visual images, arguments, points of view
	discuss	issues, data, relationships, choices/options
	interpret	symbols, text, images, graphs
	explain	explicit/implicit assumptions, bias, themes/arguments, cause/effect, strengths/weaknesses
	translate	data, visual images, arguments, points of view
	assess	probabilities, choices/options
	select	main points, words, ideas in text
identify, summarise and plan	reproduce	information, data, words, images, graphics
	respond	data, visual images, arguments, points of view
	relate	events, processes, situations
	demonstrate	probabilities, choices/options
	describe	data, visual images, arguments, points of view
	plan	strategies, ideas in text, arguments
	classify	information, data, words, images
	identify	spatial relationships, patterns, interrelationships
summarise	main points, words, ideas in text, review, draft and edit	

Appendix C – Glossary of Verbs

Verbs	Definition
Analyse	Consider in detail for the purpose of finding meaning or relationships, and identifying patterns, similarities and differences
Apply	Use, utilise or employ in a particular situation
Argue	Give reasons for or against something
Assess	Make a Judgement about the value of
Classify	Arrange into named categories in order to sort, group or identify
Compare	Estimate, measure or note how things are similar or dissimilar
Compose	The activity that occurs when students produce written, spoken, or visual texts
Contrast	Compare in such a way as to emphasise differences
Create	Bring into existence, to originate
Demonstrate	Give a practical exhibition an explanation
Describe	Give an account of characteristics or features
Discuss	Talk or write about a topic, taking into account different issues or ideas
Evaluate	Examine and judge the merit or significance of something
Examine	Determine the nature or condition of
Explain	Provide additional information that demonstrates understanding of reasoning and /or application
Extrapolate	Infer from what is known
Hypothesise	Put forward a supposition or conjecture to account for certain facts and used as a basis for further investigation by which it may be proved or disproved
Identify	Recognise and name
Interpret	Draw meaning from
Investigate	Planning, inquiry into and drawing conclusions about
Justify	Show how argument or conclusion is right or reasonable
Manipulate	Adapt or change
Plan	Strategize, develop a series of steps, processes
Predict	Suggest what might happen in the future or as a consequence of something
Reflect	The thought process by which students develop an understanding and appreciation of their own learning. This process draws on both cognitive and affective experience
Relate	Tell or report about happenings, events or circumstances
Represent	Use words, images, symbols or signs to convey meaning
Reproduce	Copy or make close imitation
Respond	React to a person or text
Select	Choose in preference to another or others
Sequence	Arrange in order
Summarise	Give a brief statement of the main points
Synthesise	Combine elements (information/ideas/components) into a coherent whole
Test	Examine qualities or abilities
Translate	Express in another language or form, or in simpler terms
Visualise	The ability to decode, interpret, create, question, challenge and evaluate texts that communicate with visual images as well as, or rather than, words

Appendix D – Glossary for ACT Senior Secondary Curriculum

Courses will detail what teachers are expected to teach and students are expected to learn for year 11 and 12. They will describe the knowledge, understanding and skills that students will be expected to develop for each learning area across the years of schooling.

Learning areas are broad areas of the curriculum, including English, mathematics, science, the arts, languages, health and physical education.

A **subject** is a discrete area of study that is part of a learning area. There may be one or more subjects in a single learning area.

Frameworks are system documents for Years 11 and 12 which provide the basis for the development and accreditation of any course within a designated learning area. In addition, frameworks provide a common basis for assessment, moderation and reporting of student outcomes in courses based on the framework.

The **course** sets out the requirements for the implementation of a subject. Key elements of a course include the rationale, goals, content descriptions, assessment, and achievement standards as designated by the framework.

BSSS courses will be organised into units. A unit is a distinct focus of study within a course. A standard 1.0 unit is delivered for a minimum of 55 hours generally over one semester.

Core units are foundational units that provide students with the breadth of the subject.

Additional units are avenues of learning that cannot be provided for within the four core 1.0 standard units by an adjustment to the program of learning.

A **negotiated study unit** makes provision for students, classes, groups or individuals to negotiate the program of learning based on the specific unit goals, content descriptions, assessment and achievement standards of the course.

An **elective** is a lens for demonstrating the content descriptions within a standard 1.0 or half standard 0.5 unit.

A **lens** is a particular focus or viewpoint within a broader study.

Content descriptions refer to the subject-based knowledge, understanding and skills to be taught and learned.

A **program of learning** is what a college develops to implement the course for a subject and to ensure that the content descriptions are taught and learned.

Achievement standards provide an indication of typical performance at five different levels (corresponding to grades A to E) following completion of study of senior secondary course content for units in a subject.

ACT senior secondary system **curriculum** comprises all BSSS approved courses of study.

Appendix E – Implementation of VET Qualifications

VET Qualifications

ICT20115 Certificate II in Information, Digital Media and Technology

For ICT20115 Certificate II in Information, Digital Media and Technology, (Release 2) the following packaging rules apply:

Total number of units = 14

7 core units plus

7 elective units

The elective units consist of:

- Up to 7 from the elective units listed below
- Up to 3 from elsewhere in ICT Information and Communications Technology Training Package or any other Training Package or accredited course at Certificate II or III level

This course, with listed competencies, meets these requirements at time of development.

Colleges are advised to check current training package requirements before delivery.

If the full requirements of a Certificate are not met, students will be awarded a Statement of Attainment listing Units of Competence achieved according to Standard 3 of the Standards for Registered Training Organisations (RTOs) 2015.

Competencies for Certificate II in Information, Digital Media and Technology

Code	Competency Title	Core/Elective
BSBSUS201	Participate in environmentally sustainable work practices	Core
BSBWHS201	Contribute to health and safety of self and others	Core
ICTICT201	Use computer operating systems and hardware	Core
ICTICT202	Work and communicate effectively in an ICT environment	Core
ICTICT203	Operate application software packages	Core
ICTICT204	Operate a digital media technology package	Core
ICTWEB201	Use social media tools for collaboration and engagement	Core
ICTICT206	Install software applications	Elective
ICTICT209	Interact with ICT clients	Elective
ICTICT210	Operate database applications	Elective
ICTICT211	Identify and use basic current industry specific technologies	Elective
ICTSAS202	Apply problem-solving techniques to routine ICT malfunctions	Elective
ICTSAS204	Record client support requirements	Elective
ICTSAS207	Protect and secure information assets	Elective

ICT30115 Certificate III in Information, Digital Media and Technology

For ICT30115 Certificate III in Information, Digital Media and Technology, (Release 2) the following packaging rules apply:

Total number of units = 17

6 core units plus

11 elective units

The elective units consist of:

- 5 units from **one** of the following specialist elective groups:
 - Group A Applications
 - Group B Network Administration
 - Group C Support
 - Group D Web Technologies
 - Group E Multimedia
- Up to 6 from any of the specialist elective groups A-E, or from Group F general elective units
- Up to 3 from elsewhere in ICT Information and Communications Technology Training Package or any other Training Package or accredited course at Certificate III or IV level.

This course, with listed competencies, meets these requirements at time of development.

Colleges are advised to check current training package requirements before delivery.

If the full requirements of a Certificate are not met, students will be awarded a Statement of Attainment listing Units of Competence achieved according to Standard 3 of the Standards for Registered Training Organisations (RTOs) 2015.

Competencies for Certificate III in Information, Digital Media and Technology

Note: The following competencies for Certificate III in Information, Digital Media and Technology have been aligned to the Data Science course from the training package. Specialist Group A electives must be delivered along with a selection of 6 other electives with no more than 3 from imported competencies.

Code	Competency Title	Core/Elective
BSBSUS401	Implement and monitor environmentally sustainable work practices	Core
BSBWHS304	Participate effectively in WHS communication and consultation processes	Core
ICTICT202	Work and communicate effectively in an ICT environment	Core
ICTICT301	Create user documentation	Core
ICTICT302	Install and optimise operating system software	Core
ICTSAS301	Run standard diagnostic tests	Core
Group A - Applications		
ICTICT203	Operate application software packages	Elective
ICTICT304	Implement system software changes	Elective
ICTICT307	Customise packaged software applications for clients	Elective

ICTICT308	Use advanced features of computer applications	Elective
ICTICT409	Develop macros and templates for clients using standard products	Elective
Group C - Support		
ICTSAS305	Provide ICT advice to clients	Elective
Group D - Web technologies		
ICTWEB201	Use social media tools for collaboration and engagement	Elective
ICTWEB301	Create a simple markup language document	Elective
Group F - General elective units		
ICTICT305	Identify and use current industry specific technologies	Elective
ICTICT306	Migrate to new technology	Elective
ICTPRG301	Apply introductory programming techniques	Elective
ICTWHS204	Follow work health and safety and environmental policy and procedures	Elective

Imported Competencies (allowed in Training Package packaging rules)

Code	Competency Title	Imported from
BSBCRT401	Articulate, present and debate ideas	Cert IV IT
ICTDBS403	Create basic databases	Cert IV IT
ICTPRG402	Apply query language	Cert IV IT
ICTPRG403	Develop data-driven applications	Cert IV IT
ICTPRG407	Write script for software applications	Cert IV IT
ICTPRG417	Apply mathematical techniques for software development	Cert IV IT
ICTPRG425	Use structured query language	Cert IV IT
ICTWEB425	Apply structured query language to extract and manipulate data	Cert IV IT

VET Competencies Mapped to Course Units

Grouping of competencies within units may not be changed by individual colleges.

Competencies designated at the Certificate III level can only be delivered by schools that have scope to do so. Colleges must apply to have additional competencies at a higher level listed on their scope of registration.

Note: When selecting units, colleges must ensure that they follow packaging rules and meet the requirements for the Certificate level. In the event that full Certificate requirements are not met a Statement of Attainment will be issued.

All core competencies must be delivered in the relevant unit. The elective competencies delivered are dependent on the elective units chosen.

VET Implementation Summary

ICT20115 Certificate II in Information, Digital Media and Technology

BSSS Unit Title	Competencies
Data Representation & Analysis	BSBSUS201 Participate in environmentally sustainable work practices BSBWHS201 Contribute to health and safety of self and others ICTWEB201 Use social media tools for collaboration and engagement ICTICT210 Operate database applications
Big Data Analysis & Techniques	ICTICT201 Use computer operating systems and hardware ICTICT206 Install software applications ICTSAS202 Apply problem-solving techniques to routine ICT malfunctions ICTSAS207 Protect and secure information assets
Machine Learning	ICTICT203 Operate application software packages ICTICT211 Identify and use basic current industry specific technologies
Data Research Project	ICTICT202 Work and communicate effectively in an ICT environment ICTICT204 Operate a digital media technology package ICTICT209 Interact with ICT clients ICTSAS204 Record client support requirements

ICT30115 Certificate III in Information, Digital Media and Technology

BSSS Unit Title	Competencies
Data Representation & Analysis	BSBSUS401 Implement and monitor environmentally sustainable work practices BSBWHS304 Participate effectively in WHS communication and consultation processes ICTWEB201 Use social media tools for collaboration and engagement ICTWHS204 Follow work health and safety and environmental policy and procedures ICTDBS403 Create basic databases ICTPRG402 Apply query language ICTPRG425 Use structured query language

Big Data Analysis & Techniques	ICTICT304 Implement system software changes ICTICT308 Use advanced features of computer applications ICTWEB301 Create a simple mark-up language document ICTPRG301 Apply introductory programming techniques ICTPRG403 Develop data-driven applications ICTPRG407 Write script for software applications ICTWEB425 Apply structured query language to extract and manipulate data
Machine Learning	ICTICT203 Operate application software packages ICTICT305 Identify and use current industry specific technologies ICTICT306 Migrate to new technology BSBCRT401 Articulate, present and debate ideas ICTPRG417 Apply mathematical techniques for software development
Data Research Project	ICTICT202 Work and communicate effectively in an ICT environment ICTICT301 Create user documentation ICTICT302 Install and optimise operating system software ICTSAS301 Run standard diagnostic tests ICTICT307 Customise packaged software applications for clients ICTICT409 Develop macros and templates for clients using standard products ICTSAS305 Provide ICT advice to clients

Competency Based Assessment

The assessment of competence must focus on the competency standards and the associated elements as identified in the Training Package. Assessors must develop assessment strategies that enable them to obtain sufficient evidence to deem students competent. This evidence must be gathered over a number of assessment items. Competence to industry standard requires a student to be able to demonstrate the relevant skills and knowledge in a variety of industry contexts on repeated occasions. Assessment must be designed to collect evidence against the four dimensions of competency.

- **Task skills** – undertaking specific work place task(s)
- **Task management skills** – managing a number of different tasks to complete a whole work activity
- **Contingency management skills** – responding to problems and irregularities when undertaking a work activity, such as: breakdowns, changes in routine, unexpected or atypical results, difficult or dissatisfied clients
- **Job/role environment skills** – dealing with the responsibilities and expectations of the work environment when undertaking a work activity, such as: working with others, interacting with clients and suppliers, complying with standard operating procedures or observing enterprise policy and procedures.

The most appropriate method of assessing workplace competence is on-the-job in an industry setting under normal working conditions. This includes using industry standard tools, equipment and job aids and working with trade colleagues. Where this is not available, a simulated workplace environment that mirrors the industry setting will be used. The following general principles and strategies apply:

- assessment is competency based
- assessment is criterion-referenced

Quality outcomes can only be assured through the assessment process. The strategy for assessment is based on an integration of the workplace competencies for the learning modules into a holistic activity. The awarding of vocational qualifications is dependent on successful demonstration of the learning outcomes within the modules through the integrated competency assessment that meets the Training Package rules and requirements.

The integrated assessment activity will require the learner to:

- use the appropriate key competencies,
- apply the skills and knowledge which underpin the process required to demonstrate competency in the workplace,
- integrate the most critical aspects of the competencies for which workplace competency must be demonstrated, and
- provide evidence for grades and or scores for the Board course component of the assessment process.

Standards for Registered Training Organisations 2015

These Standards form part of the VET Quality Framework, a system which ensures the integrity of nationally recognised qualifications.

RTOs are required to comply with these Standards and with the:

- National Vocational Education and Training Regulator Act 2011
- VET Quality Framework

The purpose of these Standards is to:

- set out the requirements that an organisation must meet in order to be an RTO;
- ensure that training products delivered by RTOs meet the requirements of training packages or VET accredited courses, and have integrity for employment and further study; and
- ensure RTOs operate ethically with due consideration of learners' and enterprises' needs.

To access the standards, refer to:

<https://www.legislation.gov.au/Details/F2017C00663>

To access The Users' Guide to the Standards refer to:

<https://www.asqa.gov.au/standards>

Guidelines for Colleges Seeking Scope

Colleges must apply to have their scope of registration extended for each new qualification they seek to issue. There is no system-level process. Each college must demonstrate capacity to fulfil the requirements outlined in the Training Package. Applications for extension of scope are lodged through the Australian Skills Quality Authority (ASQA).

Assessment of Certificate III Units of Competence

Colleges delivering any Units of Competence from Certificate III (apart from those competencies allowed in training package rules) will need to have them listed on their scope **or** negotiate a Third Party Agreement with a scoped training partner. This document must be kept on record by the college as the RTO.

Appendix F – Course Adoption Forms

		<h3>Course Adoption Form for Accredited A Course</h3>			
<p>The college is entered on the National Register (training.gov.au) to award Certificates or Statements of Attainment (SOA) delivered by this course (V Adoption only)</p> <p style="text-align: center;"><input type="checkbox"/> Yes <input type="checkbox"/> No</p>					
College:					
Course Title: Data Science			Classification: A		<input type="checkbox"/> V Adoption
